

Instructions for cleaning polycarbonate

- 1) Clean the surface with a jet of water, or with a spray bottle for watering the flowers.

- 2) Gently wash with a mild diluted soap or detergent.

- 3) Clean with a wet and very soft sponge.

- 4) Wipe the surface with a soft cloth to erase traces of water drops.

- 5) Never clean on dry surface or with dry cloth.

- 6) Do not clean in direct sunlight or at high temperatures as this can lead to staining.

- 7) Scratches you can remove with a hot air fan. With temperature approx. 450 degrees with movement over the scratches it will disappear. But never hold it in one place because a bulge will occur. We suggest that a test be made on a smaller area.
